

# Reuters DataLink

## High-quality end-of-day data from Equis International and Reuters

Announcing the newest addition to Reuters DataLink—International end-of-day data! This means that Reuters DataLink now covers most equity exchanges in Europe and Asia. Reuters DataLink also provides a world-wide futures and commodities package in addition to an international index package that covers over 3000 indices. International data goes back at least 5 years.

For North American data, Reuters DataLink gives you unlimited access to financial information on nearly all major U.S. and Canadian stocks, futures, indices, and mutual funds, accessed through MetaStock or using The Downloader. North American coverage begins in 1973 for most futures, and in 1980 for equities, indices, and mutual funds.

## Reuters DataLink Means Data You Can Depend On

You won't find a better data source for your end-of-day data needs. Reuters DataLink means high quality data that thousands upon thousands rely on every day to make their trading decisions. And since it comes from Reuters, the world's best known and most reliable information provider, you know it is data that YOU can depend on.

When you use Reuters DataLink with MetaStock software, you can instantly access your end-of-day data without ever having to go through any downloading software. Just type in the symbol of the information you want to analyze, and it is instantly there! This feature is called DataOnDemand, and Reuters DataLink customers LOVE how it makes their trading easier. And Reuters DataLink data can be accessed from any standard Internet connection.

Once you subscribe to one of the data packages, you can collect on an unlimited amount of symbols within that package. Reuters DataLink doesn't restrict you in any way on the amount of instruments you can follow.

This means you can access large amounts of data for system testing, explorations, and more.

Reuters DataLink's exclusive AutoClean™ technology ensures that the data you receive is accurate and stays that way. Plus, Reuters DataLink automatically sends stock split information, which allows your software to automatically adjust your existing historical data, resulting in smooth price charts and accurate analytics.

You'll also love being able to choose adjusted or non-adjusted mutual fund data. Lipper supplies the adjusted fund data that accounts for dividends and capital gains.

Reuters DataLink is compatible with a number of leading software packages, including MetaStock, because it doesn't matter how good the data is if you can't use it.

There are 4 data packages available, North American Stocks and Mutual Funds, European Stocks and Mutual Funds, Asian Stocks and Mutual Funds, and World-wide futures.
